

**MANUAL ROUND CAN SEALER REF.100/0055 Y 100/1000  
(Patented model)**

Close your round cans in just seconds.

Allows for a closed tight and professional look with no scratches or marks.

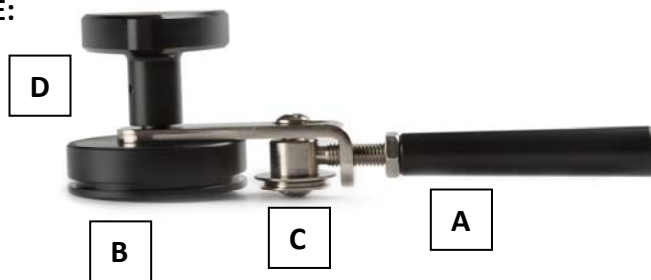

Try any appetizer canned, cold snacks, try to open some steamed cockles on the plate and serve immediately, and so on.

Model 100/0055 can only seal cans of  $\varnothing$ 8cm: item. 100/1041.

Model 100/1000 can only seal cans of  $\varnothing$ 11cm: ref. 100/1042, 100/1006.

Not suitable for industrial canned or preserved for pasteurization.

**HOW TO USE:**

- unscrew the nut on the crank (A) to separate it from the central part (B)
- Place the center disk (B) on the can and bring the small wheel around (C) by screwing the nut on the crank (A), in order to touch the can without straining or added pressure.
- on the table, press lightly on the handle (D) to press the lid.
- turn the shaft (A) around the can and each half turn to give back a quarter turn to the nut to press the slotted wheel (C) against the can, you will turn a few times around to see that the cover is closed properly.

NOTE: if you observe that the twist is too tight, it is because the nut (A) has been over-tightened, release the nut in small increments until it turns easily.
